

## **ATTENTION, VIGILANCE AND SELECTIVE PROCESSING OF INFORMATION**

*Geta Miron*, Psychologist  
Medical College of Physicians Brasov

Attention is a focused phenomenon of conscience which cannot be linked by a specific psychic process. Attention is present in all psychic processes: perception (will be more clear, precise and complete), memory (will be richer, loyal, long lasting), selection and adequate exercise of skills and learning, thinking and imagination (will be more efficient, deep and creative).
